

Chapter 3: User Interface Manual and Feature Highlights

Farm Supply Inventory System

X. User Interface Manual

The Farm Supply Inventory System does not use one generic dashboard for all users. It uses a shared application shell with role-based landing views and role-based navigation. This chapter follows the actual interface flow of the current system.

1. Opening the System

1. Open the Farm Supply Inventory landing page in a browser.
2. Review the public sections such as Features, Why It Works, FAQ, Get Started, and Contact.
3. Click Log In to open the login form or Create Account to register.

Public components include the landing navigation bar, hero section with product preview, feature cards, and login or registration actions.

2. Logging In

1. Enter email and password.
2. Click Login.
3. Wait for the system to validate the credentials.

Valid credentials open the protected app shell, while invalid credentials show an error alert. The first screen depends on role: **customer** users open **Customer Home**, **staff** users open **Staff Desk**, and **manager, admin,** and **super_admin** users open **Dashboard**.

3. Shared Application Shell

After authentication, the user enters the main app shell.

- Left sidebar with brand title, subtitle, and role-mode pill
- Role-aware menu buttons

- Top header with current view title and subtitle
- Current user information box
- Refresh button
- Logout button

The sidebar can show the following labels depending on role: Dashboard, Staff Desk, Home, Shop, My Orders, Favorites, Profile, POS or POS Counter, Operations, Reports or Shift Reports, Users, and Super Admin.

4. Admin Dashboard

The real Dashboard screen is used for manager, admin, and super admin workflows.

- Admin overview guide panel
- Shortcut buttons such as Open Stock Tasks and Open Reports
- Workflow strip: Watch, Update, Review
- KPI cards for Products, Active Products, Low Stock, Out Of Stock, Inventory Value, Today Sales, Month Sales, Total Suppliers, and Total Branches
- Low-Stock Watch table
- Recent Activity list
- Top Movers, Stock by Category, and Monthly Sales tables

Users start by reviewing stock risk and recent movement, then open Operations for stock work or Reports for deeper review.

5. Staff Desk

The real default staff landing view is Staff Desk.

- Staff Operations Hub hero panel
- Open POS button
- Shift Snapshot
- Next steps

- Metric cards for active products, low-stock alerts, today sales, and branches
- Low-Stock Watch
- Recent Movement
- POS Snapshot

This page reduces clutter and moves staff quickly into checkout, stock checking, and receiving tasks.

6. Customer Home

The real default customer landing view is Customer Home.

- Mini navigation: Overview, Steps, Quick Tools, Delivery
- Welcome hero and action buttons
- Metrics for Products, Cart, Active Orders, and Favorites
- Delivery profile card
- Start Here panel
- Main customer tools panel
- Delivery Details panel

This home screen prepares the customer before opening the full customer workspace.

7. Customer Workspace

The Customer Workspace uses four real sections: Browse, Orders, Favorites, and Profile.

7.1 Browse

The Browse section is divided into the real workflow cards 1. Browse products, 2. Review product, and 3. Checkout.

- Catalog search input
- Stock-status filter
- Sort dropdown
- Product cards with View, Favorite, and Add to Cart

- Product spotlight card with price, category, supplier, stock, and customer reviews
- Cart panel with quantity controls
- Payment method selector: COD, Cash, Online Payment
- Optional promotion code and delivery notes
- Place COD order, Place cash order, or Place online order

7.2 Orders

The Orders section contains tracking summary chips, live tracking cards, an order table, a request form, and a request history table. Customers can review order status, reorder previous items, and submit product requests.

7.3 Favorites

The Favorites section contains Saved for later, Low-stock alerts, Updates, and Seasonal picks. It keeps saved products, alerts, notifications, and suggestions together.

7.4 Profile

The Profile section contains the profile form, password form, and product review form so delivery details remain ready for checkout.

8. POS Counter

The real POS screen is the dedicated staff sales transaction view.

- POS Workspace hero
- Live warehouse label and stock-source note
- Step strip: Select warehouse, Add products, Complete payment
- Warehouse selector and product search
- Live product catalog cards
- Checkout form
- Discount and payment controls
- Sale cart with editable quantity inputs
- Summary chips for items, subtotal, discount, grand total, amount tendered, balance due, change, and payment status

- Complete Sale button
- Sale result card
- Print Last Receipt
- Recent POS Sales

This is the actual main transaction screen used for counter checkout.

9. Operations Workspace

The Operations view is organized into the real tabs Setup, Product Catalog, Stock Adjustment, Inventory Summary, Batch Health, Receiving, Orders, and Branches.

- **Setup:** category, supplier, and warehouse forms
- **Product Catalog:** product form, catalog list table, and quick stock in/out form
- **Stock Adjustment:** presets, draft summary chips, adjustment form, draft table, and posted history
- **Inventory Summary:** inventory KPI chips, status breakdown, and warehouse summary table
- **Batch Health:** filters, status update form, aging metrics, batch table, and aging table
- **Receiving:** supply deliveries form, draft delivery items, and recent stock receipts
- **Orders:** order management and promotions
- **Branches:** smart forecasting, multi-branch management, and branch inventory overview

10. Reports Workspace

The Reports view is organized into the real report groups Inventory, Sales, Access Logs, and Settings.

- **Inventory:** Movement Summary and Expiring Stock
- **Sales:** Sales Report, Top Selling Products, Inventory Value, and Low Stock Report
- **Access Logs:** Login Activities and Audit Logs
- **Settings:** Settings & Backup and Safeguards

11. Users Workspace

The Users screen uses two real tabs: Team Directory and Editor.

- Account filter form
- User table with Edit and Delete
- Account creation and editing form
- Role selection for customer, staff, manager, admin, and super_admin

12. Super Admin Workspace

The Super Admin view is organized into the real control areas Overview, Setup, Product Catalog, Stock Flow, Inventory Summary, User Accounts, Security, and Logs.

Typical components include KPI overview cards, role distribution tables, shortcut cards, setup counts, product and stock summary cards, user-account actions, security tools, and log or activity panels.

13. Logging Out

1. Click Logout from the top header.
2. Wait for the session to close.
3. The system returns the user to the public landing view.

Actual role-based flow: Landing Page -> Login -> Customer Home / Staff Desk / Dashboard -> Module Workspace -> Transaction, Review, or Report -> Refresh or Logout

Component	Purpose	Actual Use in the System
Sidebar menu	Role-based module access	Opens Dashboard, Staff Desk, Customer Home, POS, Operations, Reports, Users, or Super Admin
Top header	Context and session control	Shows active view title, subtitle, user box, refresh, and logout

Component	Purpose	Actual Use in the System
Guide panels	Workflow orientation	Used in Dashboard, Operations, Reports, and Super Admin
KPI cards and chips	Quick metrics	Used in Dashboard, Staff Desk, Customer Home, Inventory Summary, and Super Admin
Data tables	Record review and monitoring	Used for products, inventory, orders, promotions, receipts, reports, logs, and users
Form panels	Transaction and maintenance input	Used in POS, setup, stock adjustment, receiving, checkout, profile, and user management
Status badges	Visual feedback	Used for stock condition, order status, login status, and role labels
Success and notice panels	User feedback	Used for checkout, POS result, and form submission feedback

XI. Feature Highlights

The current system combines public access, role-based dashboards, sales, stock management, reporting, and governance in one Laravel-based interface.

Feature	Actual Screen or Workflow	User Need or Workflow Benefit	Laravel Application
Role-based landing views	Customer Home, Staff Desk, Dashboard	Sends each role to the correct starting workspace	Sanctum auth, middleware, role checks
Shared application shell	Sidebar plus top header	Keeps navigation and session controls consistent	Blade structure, dynamic state handling
Admin dashboard	dashboardView	Shows stock risk, movement, category stock, and sales trends at a glance	Dashboard controller, Eloquent queries, reporting endpoints
Staff desk	staffHomeView	Gives staff quick access to checkout, stock alerts, and shift data	Role-aware rendering, shared dashboard data

Feature	Actual Screen or Workflow	User Need or Workflow Benefit	Laravel Application
Customer workspace	customerView with Browse, Orders, Favorites, and Profile	Supports product browsing, ordering, tracking, favorites, delivery profile, and reviews	Protected customer routes, validation, Eloquent relations
POS counter	posView	Handles fast warehouse-based checkout with cash, GCash, and discount support	Validation, file uploads, DB transactions, stock deduction logic
Operations workspace	operationsView	Centralizes setup, catalog, adjustments, inventory, receiving, order management, forecasting, and branches	CRUD controllers, transaction logs, inventory endpoints
Reports workspace	reportsView	Groups inventory, sales, access logs, and settings into one reporting area	Report controllers, query builders, governance endpoints
Users workspace	usersView	Helps admins create, edit, filter, and manage accounts	User controller, access control, form validation
Super Admin control center	superAdminView	Supports high-level oversight for setup, stock, accounts, security, and logs	Super admin routes, audit logs, token control, security reporting

In summary, the actual user experience of the Farm Supply Inventory System is role-based and workspace-driven. The interface starts with the correct home screen for each role, then branches into dedicated modules for shopping, checkout, POS, operations, reports, user administration, and super admin governance.
